Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
The invention relates to a 1526 bp Psychrobacter pacificensis 168 rDNA sequence (AAC87531) and an oligonocleotide probe (AAC87532) comprising part of the Psychrobacter pacificensis 168 rDNA sequence which are used for monitoring the growth of psychrophilic bacteria and the circulation of deep-sea water. Psychrobacter pacificensis is an aerobic, of deep-sea water. Psychrobacter pacificensis is an aerobic, or ammegative, non-motille, non-spocificensis is an aerobic, or originally isolated from the Japan Trench. The invention also relates to a novel method for detecting or specifically identifying Psychrobacter pacificensis only via the use of the 168 rDNA sequence. The 168 rDNA sequence and derived oligonocleotide probe are useful for the species-specific detection of Psychrobacter pacificensis to study and monitor its growth as an indicator of the circulation of deep-sea water. The method of the invention is rapid, accurate and has high materials. The present sequence represents the Psychrobacter construction of pacificensis. The present sequence represents the Psychrobacter pacificensis pacific pacifi
DNA probe originating from psychrotrophic bacterium applicable in species-specific detection of the microorganism as indication in studying and monitoring its growth and circulation of deep-sea water
                                                                                                                                                                                                                                        Page 30; 37pp; Japanese
                                                                                                                                                    with sensitivity
                                                                                                                                                                                                                                                  Claim 1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                383
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   503
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a Moraxella catarrhalis genomic library comprising of a combination of 41 nucleic acid molecules (see AAF28514-AAF28554). The library has a number of uses described in the specification e.g. is useful for aldentifying diagnostic and therapeutic compositions. M. catarrhalis (Branhamella catarrhalis) is a large aerobic, gram-negative diplococcus, normally found among the bacterial flora of human upper airways. M. catarrhalis is known to cause acute, infections such as ottics media, sinusitis and bronchopulmonary infection and life-threatening, systemic diseases including endocarditis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              89

                                                                                             Q
                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a method for monitoring oil contamination of sea water by detecting, in the sea water, a microbe having the following properties: (1) it has no flagellum; (2) it is a Gram-negative bacterium; (3) it belongs to Proteobacteria, gamma subdivision; (4) it cannot assimilate glucose as a single carbon source; and (5) it efficiently assimilates at least one of 10-30C n-alkanes. This sequence represents a fragment of the 165 rbMA gene from the microbe of the invention, isolate K3-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           149

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method for monitoring oil contamination of sea water by detecting, in the sea water, a microbe having the following properties: (1) it has no flagellum; (2) it is a Gram-negative bacterium; (3) it belongs to Proteobacteria, gamma subdivision; (4) it cannot assimilate glucose as a single carbon source; and (5) it efficiently assimilates at least one of 10-30C n-alkanes. This sequence represents a fragment of the 16s rDNA gene from the microbe of the invention,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         83
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              84
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Monitoring of oil contamination of sea water - where oil contamination is evaluated by detection of a microbe having properties from e.g. having no flagellum, being a Gram-negative bacterium, belonging to Proteobacteria, gamma subdivision, etc.z

                                                                                                                                                           1525
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ŝ
                                                                                                                                                                       The invention relates to a method for monitoring oil contamination of sea water water by detecting, in the sea water, a microbe having the following properties: (1) it has no flagellum; (2) it is a Gram-negative bacterium; (3) it belongs to Proteobacteria, gamma subdivision; (4) it cannot assimilate glucose as a single carbon source; and (5) it efficiently assimilates at least one of 10-30c n-alkanes. This sequence represents a fragment of the 16s rDNA gene from the bacterium Marinobacter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            83
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         litoring of oil contamination of sea water - where oil contamination evaluated by detection of a microbe having properties from e.g. ring no flagellum, being a Gram-negative bacterium, belonging to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a method for monitoring oil contamination of sea water by detecting, in the sea water, a microbe having the following properties: (1) it has no flagellum; (2) it is a Gram-negative bacterium; (3) it belongs to Proteobacteria, gamma subdivision; (4) it cannot assimilate glucose as a single carbon source; and (5) it efficiently assimilates at least one of 10-30C n-alkanes. This sequence represents isolate K2-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Monitoring of oil contamination of sea water - where oil contamination is evaluated by detection of a microbe having properties from e.g. having no flagellum, being a Gram-negative bacterium, belonging to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        627
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 623
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        683
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   747
The invention relates to a method for monitoring oil contamination of sea water by detecting, in the sea water, a microbe having the following properties: (1) it has no flagellum; (2) it is a Gram-negative bacterium; (3) it belongs to Proteobacteria, gamma subdivision; (4) it cannot assimilate glucose as a single carbon source; and (5) it efficiently assimilates at least one of 10-30c n-alkanes. This sequence represents a fragment of the 165 rDNA gene from the microbe of the invention,
                                                                                                                                                                                                                                                                                                                                                                                                                        149

The invention relates to a method for monitoring oil contamination of sea water by detecting, in the sea water, a microbe having the following properties: (1) it has no flagellum; (2) it is a Gram-negative bacterium; (3) it belongs to Proteobacteria, gamma subdivision; (4) it cannot assimilate ducose as a single carbon source; and (5) it efficiently assimilates at least one of 10-30C n-alkanes. This sequence represents a fragment of the 16s rDNA gene from the microbe of the invention,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           litoring of oil contamination of sea water - where oil contamination evaluated by detection of a microbe having properties from e.g. ing no flagellum, being a Gram-negative bacterium, belonging to

The invention relates to a method for monitoring oil contamination of sea water by detecting, in the sea water, a microbe having the following properties: (1) it has no flagellum; (2) it is a Gram-negative bacterium;
                                                                                                                                                                                                                                                                                                             (3) it belongs to Proteobacteria, gamma subdivision; (4) it cannot assimilate glucose as a single carbon source; and (5) it efficiently assimilates at least one of 10-30C n-alkanes. This sequence represents a fragment of the 16S rDNA gene from the microbe of the invention.
                                                                                                                                                                     Monitoring of oil contamination of sea water. - where oil contamination is evaluated by detection of a microbe having properties from e.g. having no flagellum, being a Gram-negative bacterium, belonging to Proteobacteria, gamma subdivision, etc.z
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AGGATCCGTAGCTGGTCTTAGAGGATGATCAGCCACACCGGGACTGAGACACGGGGA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             208
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       268
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   263
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method for monitoring oil contamination of sea water by detecting, in the sea water, a microbe having the following properties: (1) it has no flagellum; (2) it is a Gram-negative bacterium; (3) it belongs to Proteobacterist, gamma subdivision; (4) it cannot assimilate glucose as a single carbon source; and (5) it efficiently assimilates at least one of 10-30C n-alkanes. This sequence represents a fragment of the 16s rDNA gene from the microbe of the invention,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         203
